Techno Guide on Organic Squash Production

Production Management

Plowing

Plow the area to be planted.

Staking

Materials Needed: meter stick, twine, bamboo, splint

Procedure:

Stake the planting area. The distance of each stake which will serve as a guide in sowing the squash seeds is 3m x 3m.

Digging Holes

Dig holes with a depth of 15 cm.

Application of Organic Fertilizer

Apply organic fertilizer at a rate of one (1) kilo per hill.

Sowing of Squash Seeds

After applying organic fertilizer in the hole sow three (3) seeds per hill.

Care and Management

- Water the squash plants everyday preferable early in the morning.
- Apply organic gertilizer every 15th day for seed germination.
- Spray the plants with probiotics (organic pesticide) once a week.
